Lagos, Nigeria | Open to remote / relocation

SUMMARY

Computer Engineering graduate (B.Eng, 2025) building backend services in Go and Rust, and maintaining open-source developer tooling on Stellar. Brings a data reporting background from a Chevron internship and certifications in agentic AI development and AI for business.

CERTIFICATIONS

GitHub Certified: Agentic AI Developer — Earned Oct 2026 | Valid to Oct 2027

Microsoft Certified: AI Business Professional — Earned Oct 2026

SKILLS

Programming: Go, Rust, TypeScript, Python, SQL

Backend and blockchain: Soroban smart contracts (Stellar), Next.js, Supabase, Linux

AI and tooling: GitHub (Open-source maintenance, Copilot, Agentic workflows), Google AI Studio

Data and platforms: Power BI, Tableau, Excel, Microsoft Power Platform

EXPERIENCE

AI Native Software Engineer | Learn2Earn — Oct 2025 – Present

- Built backend web services in Go, using AI-assisted development tools to speed up deployment of backend infrastructure.
- Optimized file system operations and managed configuration in Linux environments to improve server performance and reliability.
- Collaborated with peers during technical sprints to debug Go applications and streamline development workflows.

Data and Insights Intern | Chevron — Feb 2024 – Jun 2024

- Ran daily stand-ups and resolved blockers to keep the team on schedule.
- Built recurring reports in Excel, Power BI, Power Apps and Power Automate, reducing manual effort.
- Corrected dataset discrepancies, improving the accuracy of data used for downstream decisions.

OPEN SOURCE

Accensa | Core developer and Maintainer — Stellar Wave Program (Drips Wave)

- Maintain all three public repos of a merchant back-office for x402 sellers on Stellar: **accensa-app** (Next.js dashboard, indexer and SDK), **accensa-contracts** (Soroban receipt anchoring and refund vault) and **x402-facilitator-stellar** (payment facilitator).

Tollcraft | Creator and Maintainer — Stellar Wave Program (Drips Wave)

- Built Rust tooling for Soroban developers: **soroban-cost-linter** flags resource-expensive contract patterns at write time, and **soroban-budget-assert** adds runtime budget assertions.

PROJECTS

IntelliDesk: AI-Driven Helpdesk System

- Power Platform helpdesk integrated with AI models via Google AI Studio, with Dataverse schemas and logic built using GitHub Copilot. Delivered for the Agents League Hackathon.

FiveGuesses: Interactive Logic Game

- Full-stack higher-or-lower game with a Go backend, a leaderboard moved from JSON to Supabase/SQL, and a Google Stitch frontend deployed on Render.

EDUCATION AND AWARDS

B.Eng, Computer Engineering | University of Benin — Oct 2019 – Apr 2025

Science & Technology Scholarship Award | MTN Foundation — Sep 2023 – Sep 2026

Aspire Leaders Program, Cohort 4 (Harvard Univ.) — Aug 2025 – Present

Effective Leadership | HP Foundation — Jun 2025 – Present
